PROJECT C3103

Reference renumbering of Rail Box cars. As you are aware, we are receiving 550 cars and the Missouri Pacific is receiving 988 cars from Rail Box. These cars are scattered throughout the country. In order that these cars can more quickly start generating revenue for our corporations and to avoid unnecessary transportation of moving empty cars to system shops for renumbering, we have made a reciprocal agreement with the MP that we will renumber their RBOX cars when empty on the UP system and, in turn, MP will renumber our RBOX cars when empty on their system.

Therefore, please immediately arrange at all points to inspect and renumber the Rail Box cars on the attached list to Missouri Pacific numbers in accordance with the following instructions.

The existing reporting marks and numbers are to be painted out with black paint at 12 locations on each car. The areas to be painted include both the sides and the ends of the car, inside of the doors, inside of the car left of the doorway near the top cord, both sides of the center sill midway of the car and on the outboard face of the truck bolsters at the AR and BL locations. The area to be painted out on the sides and ends of car must be carefully marked off, preferably with masking tape. The area to be painted out on the sides of the car is to be limited to two inches above and below the RBOX reporting marks and car numbers and no wider than the inboard weld line of number two and four side post.

The size of the MP reporting marks and numbers are as follows:

Side	9"
End	4"
Center Sill	3"
Inside of Car, Doors and Truck Bolsters	2"

White stencil paint is to be used for applying new MP initials and numbers.

For location of the MP initials and numbers on the side of the car, use the same base line as was used for the RBOX initials and numbers. Each initial is to be placed two inches from the weld line, one each side of post number three (the same location as present initials "B" and "O"). The six-digit car numbers are to be spaced one inch apart, centering three each side of post number three. Allow one inch space between the post weld lines and the third and fourth car numbers. At all other locations, use the same base line as was used for the old car initials and numbers.

ACI labels are also to be covered over with black paint.

As the re-initialing and numbering change is performed on empty cars only, you must also complete the inspection.

If any cars are found unserviceable due to conditions not covered by defect card or are found with a defect card, do not change the initials or numbers. You are to hold the car and call Mr. O. Smith, extension 3571, Omaha, as soon as possible for shop disposition.

Material and labor costs are chargeable to Operating Expense.

Report car completions transmitting an "A" message to OM27, attention O. Smith. In the "A" message, indicate the following:

- Old initial and number
- New initial and number
- Light weight as stenciled
- Load limit as stenciled
- AAR commodity classification of car (A, B, C, K, or U)

Also, please submit a brief form or written report of the general (good, fair, or poor) condition of the following:

- Right side door
- Left side door
- Door threshold plates
- Door posts
- Interior floor
- Interior end lining
- Side sheets
- End sheets
- Roof sheets
- Exterior paint
- Trucks (indicate excessively worn areas)
- Miscellaneous remarks

Attached is a list of RBOX car numbers and new MP numbers.

J. F. McDONOUGH
